

RON POGUE AND MARK BOESE, Tulsa Police Crime Lab

From ABC PrimeTime - Aug. 9, 2006

Forensic scientist Ron Pogue at the Tulsa Police Crime Lab in Oklahoma checked a Morgellons sample against known fibers in the FBI's national database.

"No, no match at all. So this is some strange stuff," Pogue says. He thinks the skeptics are wrong. "This isn't lint. This is not a commercial fiber. It's not."

The lab's director, Mark Boese, says the fibers are "consistent with something that the body may be producing." He adds, "These fibers cannot be manmade and do not come from a plant. This could be a byproduct of a biological organism."
